Thanks but sorry, my question was for "T-SQL" as you can see. Your answer was also included in Combine Multiple child rows into one row MYSQL by the way. - Soner Gönül Aug 1 '16 at 13:18

SQL Server: combining multiple rows into one row - Stack ...

ALL is used to select all records of a SELECT STATEMENT. It compares a value to every value in a list or results from a query. The ALL must be preceded by the comparison operators and evaluates to TRUE if the query returns no rows. For example, ALL means greater than every value, means greater than the maximum value.
