Tree Drawing in LaTeX
drawing trees one of the easier tasks in LATEX. Several are described here. In some ways, the main problem is the range of choice available. For what it is worth, I recommend: • the qtree package for general purposes (it handles trees with up to five daughters, and to a depth of 20. For simple trees (i.e. with atomic cate-

TikZ/PGF is a flexible and powerful package for creating graphics in LaTeX. It's syntax can be somewhat overwhelming at the beginning. In this post I show the basics of tree drawing using TikZ and LuaLaTeX. The following code only works with LuaLaTeX. Make sure you use the luatex engine rather than standard tex/latex for typesetting. Setup

For making trees labelled with AVMs (Feature Structures), a useful hint is to first use \newcommand to define commands to draw the AVMs (this means you can check they are correct before you try to combine them into a tree), and makes the tree much easier to read. We define three commands to draw the AVMs: \sA, \sB, and \sC, e.g.

Grids: Very often when drawing diagrams we will want to draw a grid. To do this we use the \draw command followed by some additional arguments. For example, we specify the grid step size using step= and a length. We've also specified the colour gray and told it to make the lines very thin.After these arguments we enter the co-ordinates of the bottom-left corner, followed by the keyword grid ...
